

Autonomic's Mirage Media Server Now Compatible with Compass Control® Technology

Bi-directional driver gives integrators a plug-and-play solution

Armonk, NY. June 26, 2013—Autonomic, supplying the custom electronics industry with award-winning high performance cloud-based media solutions, has announced that the Mirage Media Server is now compatible with the Compass Control System by Key Digital®.

Engineers at Compass Control profiled the Mirage Media Server (MMS) and completed a bi-directional driver that enables seamless integration of the MMS in the Compass Control environment while greatly reducing the installation time for integrators. "It is always advantageous for our sales channel to experience cross-compatibility between the Mirage Audio System and other in-home technologies and control system platforms. This new driver for the Compass Control System is an excellent example of that," explained Autonomic CEO Michael de Nigris.

"Resulting from cooperative efforts between Key Digital and Autonomic, the integration of the Mirage Media Server within the Compass Control environment represents a powerful and user-friendly comprehensive solution delivering iOS-based control and entertainment functionality," stated Key Digital's Vice-President of Sales, Michael Lakhter. "The synergy between the Compass Control System and the Mirage Media Server gives our network of installers a plug-and-play whole-house audio solution that delivers both local and streaming content. The Compass Alliance™ Partners have come together to create a system that has full driver integration already completed, increasing efficiency for integrators," Lakhter concluded.

The Mirage Audio System has been designed either as a standalone distributed audio solution or to be used with advanced modules engineered specifically for the most popular control systems. This streamlines the installation process and gives integrators an intuitive entertainment solution that is ideal for any application. On top of this flexibility, Autonomic offers integrators a highly profitable product lineup and limited distribution.

Autonomic Controls, Inc. (www.autonomic-controls.com) introduced the world's first cloud-based media server, making audio and video consumption more reliable, easy and fulfilling. Exclusively engineered for control system integration, Autonomic products have become the standard for converging content for multi-room distribution from the most popular sources, such as iTunes, Windows Media, Last.fm, PANDORA® internet radio, Rhapsody®, TuneIn Radio, SiriusXM Internet Radio and Spotify.
