Autonomic Mirage Music Players First Third Party Entertainment Platform Compatible with Crestron Pyng™

Mirage Music Players bring high-resolution audio, all major streaming services and the luxury of custom queues and playlists to Pyng users

Armonk, NY. May 29, 2015 – Autonomic, makers of the finest whole-house music systems, has announced support for the Crestron Pyng home automation app. Autonomic Mirage Music Players are the first third party entertainment devices to offer Crestron Pyng compatibility, providing integrators with the ultimate whole-house music solution within the Crestron Pyng environment.

"Autonomic and Crestron have collaborated extensively, maximizing our products interoperability in order to provide the features, functionality and superb sound quality that differentiates this cooperative solution from ordinary consumer-oriented music boxes," stated Autonomic CEO Michael de Nigris. The newest 5.2 software version from Autonomic enables Crestron Pyng to automatically discover and configure the Mirage Music Player without programming, increasing overall efficiency for integrators.

Also new with the 5.2 software from Autonomic are key updates to the Crestron Smart Graphics™ module based on feedback from dealers. Changes include easier programming of Smart Graphic touch screens and remote controls that reduces programming time, along with the capability to play/pause music as well as view the current state of all Mirage Music Players from the Smart Graphics interface. Smart Graphics users now have easier access to the Autonomic exclusive TuneBridge® feature as well as the ability to browse within a queue. Additionally, integrators now have precise control over which streaming services are accessible from each Smart Graphics touch screen within the home.

The upgrade to Pyng compatibility and new Smart Graphics features are available for all Mirage Music Players via the Autonomic Dealer Zone or assistance from Autonomic technical support.
