

Revolutionary Autonomic MMS-1e Music Streamer Offers Drop-in Compatibility for Crestron NSP-1 Projects

Highlighted by eAudioCast™ audio-over-Ethernet technology, a compact chassis and access to all popular streaming services as well as high-resolution audio playback, the MMS-1e has been engineered to be drop-in compatible with the Crestron NSP-1 Network Stream Player

Armonk, NY. September 13, 2016 – Autonomic, makers of the finest whole-house music systems, has announced that the newly introduced MMS-1e whole-house music streamer featuring proprietary eAudioCast audio-over-Ethernet technology can be used interchangeably with the Crestron NSP-1 Network Stream Player. This inherent compatibility is the result of cooperation between Autonomic and Crestron.

When installing the Autonomic MMS-1e within the Crestron environment as a drop-in replacement for the NSP-1, integrators will appreciate that the MMS-1e requires no additional programming to function perfectly. This makes the MMS-1e a highly efficient solution for providing users with a vast array of new and desirable features such as access to additional streaming service providers and high-resolution digital playback capability. For Crestron integrators, the MMS-1e represents a critical profit opportunity to deliver an affordable product packed with the features customers want.

“Autonomic and Crestron, located close to each other in the metro New York area, have often collaborated to bring integrators a valuable blend of whole-house entertainment and smart home functionality,” explained Autonomic CEO Michael de Nigris. “The MMS-1e was developed with support from Crestron to ensure seamless compatibility between the two technologies and create a unique value proposition benefitting both integrators and their clients.”

“Crestron appreciates how critical premium whole-house entertainment is to homeowners, and we want to empower our dealers to deliver that experience to their clients quickly and easily,” said John Clancy, VP of Residential Systems at Crestron. “By making the MMS-1e drop-in compatible with Crestron’s NSP-1, our dealers have even more options at their disposal.”

The completely solid state MMS-1e music streamer represents a new entry level product for Autonomic that will broaden the opportunities for integrators to deliver premium entertainment solutions, particularly to those clients focused on enjoying streaming content throughout the home. The Autonomic eSeries MMS-1e is a single or dual stream whole-house music player featuring advanced eAudioCast audio-over-Ethernet technology that transforms the single stream offered on the MMS-1e into two network streams when paired with any Autonomic eSeries amplifier. For applications requiring more than two simultaneous music streams, integrators can easily add additional MMS-1e streamers, each of which will make two additional eAudioCast programs available.

The MMS-1e will become available end of September, 2016 with an MSRP of **\$995**.
