

FOR IMMEDIATE RELEASE

AudioControl to Debut Two New Products at 2017 Spring KnowledgeFest in Indianapolis

Seattle, WA, March 30th, 2017 – AudioControl (audiocontrol.com), makers of innovative high-performance audio solutions for the residential, commercial and automotive markets has announced the unveiling of two new products—the LC-6.1200 6-channel amplifier and the DM-608 processor—making their debut at the 2017 Spring KnowledgeFest, **booth 212** to be held in Indianapolis.

Attendees will be see the new amplifier and processor, both shipping now, and be treated to a demo vehicle featuring two LC-6.1200's mated to a DM-810 processor integrated with the factory head unit in a 2013 Subaru Legacy built by Mark Rubacha of Cartronix in Valparaiso, Indiana.

The LC-6.1200 amplifier features fully adjustable independent Linkwitz-Riley crossover networks for precise system configuration. Other key features of the LC-6.1200 include AudioControl's proprietary patented AccuBASS® circuit, a unique smart technology that has been designed to seamlessly apply bass compensation only when required in order to restore low frequencies to their proper level within the recording. AccuBASS is an indispensable tool for OEM interface projects.

The DM-608 processor enables dealers to optimize the performance of any audio system, regardless of whether they are using a factory or aftermarket source. Key features include active speaker level inputs as well as line-level and digital audio inputs, providing up to 8-channels of output. AudioControl's smart user interface gives installers the power of AudioControl processing through a flexible, highly intuitive PC interface packed full of features. Configure signal summing, 30-bands of equalization, signal time-alignment, input delay and phase correction, plus proprietary features such as AccuBASS®, GTO™ Signal Sense, and MILC™ as well as integrated input and output RTA's. The built-in option port on the DM-608 will allow hi-res streaming directly into the DSP, and the option port can also be used for future inputs, controllers and interface solutions.

"The AudioControl line has just made sense for us," explained Eric Carter, President of Cartronix. "We work on many vehicles where our clients prefer to keep their factory radio. AudioControl has been a win-win lineup for us, the product is bulletproof, system tuning is easy and their tech support and customer service has always been amazing. I am very excited to be building this demo car for AudioControl and can't wait to hear it at KnowledgeFest."
