FOR IMMEDIATE RELEASE

SAVANT® TRANSFORMS THE CONTROL AND AUTOMATION MARKET WITH CLOUD-BASED MANAGEMENT SOFTWARE AND IPAD®-BASED CONFIGURATION TOOL

New Savant Central Management and Savant Studio App deliver secure, cloud-based project management along with intuitive configuration of entry-level systems

HYANNIS, MASS. June 28ᵗʰ, 2018 — Savant, a leader in smart home technology, has announced today the addition of Savant Central Management and Savant Studio to their software and services suite. These two powerful tools will enable integration professionals to modernize their businesses, increase productivity and provide valued services to their clients. Paired with Savant's flagship software tool RacePoint Blueprint and the award-winning Pro App, Savant delivers the most scalable platform for configuration, service and end-user features on the market today. Savant Central Management and Studio encompass some of the most significant innovations since Savant was founded 13 years ago.

What is Savant Central Management
Savant Central Management is a cloud-based integrator tool (accessed by mobile device, PC or Mac®) that delivers secure access to every Savant deployment. This includes software revision tracking, remote diagnostics, time/date stamped systems logs, host maintenance and configuration capabilities.

At the core of Savant Central Management is the capability to protect the integrator and their clients with permission-based secure access. With Savant Central Management, integrators can create internal access tiers – allowing limited access to a client's home and data. In addition, via the Savant Pro App, clients will be asked to consent to remote system access by the integrator for as little as an hour or as long as the project requires. All permissions are time and date stamped.

Savant Central Management also creates opportunities for integrators that represent real value to their clients. Integrators will be alerted to service opportunities and they can provide many critical tasks remotely including software releases, firmware updates, access to revision history, host logs and so much more.

"Just as our Blueprint software revolutionized the methodology for custom system configuration and deployment, Savant Central Management and Savant Studio represent the next leap forward in cloud-based integration software" said Robert Madonna, CEO of Savant. *"Savant installers now have access to a comprehensive suite of tools that provide new levels of service to their clients and greater opportunity to expand their businesses."*

What is Savant Studio
Savant Studio is an elegant, intuitive iOS-based, field configuration tool for entry level end-to-end system design and deployment. Utilizing Savant's new S2 Host at the core, Studio supports the full range of features and services with Savant music, lighting, climate and more.

Now system configuration can be done via Savant Blueprint software on a Mac or via Savant Studio on an iPad. With the introduction of Savant Central Management, all project files, configurations and revision management history are stored in the cloud. For the ultimate in deployment flexibility, configurations created in Blueprint can be accessed via Savant Studio and vice versa.

Modernizing the Business
Savant Studio and Savant Central Management, the latest additions to Savant's software and services suite, represent a critical opportunity for integrators to modernize their business practices including addressing client security and privacy policies, creating scalable programming and service teams, and developing auditing practices for field service, employee access and system/software versions across all installations.

Savant Studio and Savant Central Management will be available to all Savant integrators in Q3 2018, with beta deployments nationwide going on now.
