**Mohegan Sun at Pocono Downs
offers simulcast racing from
tracks around the world on
roughly 200 high-definition
screens. When the time came
to create an intuitive iPad-based
control system, Mohegan
looked to International Sound
Corporation (ISC) and On Controls
for a solution.**

ABOUT THE PROJECT

Background

Mohegan Sun at Pocono Downs offers patrons a premium venue to view and wager on live harness racing with the added intrigue of simulcast racing from other tracks around the world that can be viewed live on roughly 200 high-definition screens. With HD video available to patrons in the Live Simulcasting area, the Clubhouse, Lounges, and Teller Line area, the objective was to disperse an array of channels (video feeds of both live and simulcast racing events) evenly for viewing with intuitive iPad-based control. International Sound Corporation (ISC) of Hialeah, Florida utilized an On Controls platform to deliver precisely what the client desired.

The Goal

One key differentiator of the On Controls platform is limitless customizability that can be efficiently facilitated by a dealer.

Using the On Controls software interface on an Apple® iPad®, ISC engineered a tailored solution for Pocono Downs to provide them with effortless control of multiple racetrack HD video signals on a variety of displays. This ensures that the racing fan has unfettered access to any and all live and simulcast events as they unfold from anywhere in the facility. The team at ISC was able to create a purpose-specific control solution called Advanced Device Control

(ADC) based upon the On Controls software platform. The system enables Pocono staff to walk through the facility with an iPad and send mass commands directing video to appropriate screens via an intuitive touch interface customized for this venue. The inherent flexibility of the On Controls platform makes it an ideal solution for commercial integrators like ISC to adapt the software to address the unique requirements of each installation.

Execution

iPad in hand, the Mohegan Sun at Pocono Downs systems operator enters the control app, bringing up the Main Menu screen with an array of control button options as well as immediate access to ten banks of video screens. The operator can choose to control individual displays using a button labelled Individual Control for all Devices, bringing up a virtual map of the facility featuring a tile for each display along with the required control buttons on the iPad. A touch of any tile gives the operator control over that specific screen. Or the operator can select the Positions Macro button, which gives him/her immediate control over groups of displays (8, 12 or 16 at a time depending on if it is a light, medium or heavy traffic time for the venue). The Hot Screens button gives the operator immediate control over a group of large (80 and 85-inch flat panel) displays located strategically throughout the facility. This was an example of an application-specific feature created for Mohegan Sun at Pocono Downs by the team at ISC. "

We greatly appreciate the flexibility of the On Controls platform enabling us to create custom macros and an intuitive user interface for the client," stated the ISC engineering team. The on-site operator also benefits from a preview monitor on a segment of the iPad showing them the video content on the screen (s) they are controlling in real time. This gives the facility a sense of confidence that the patrons are viewing the proper content. Should a technical concern arise, there is a hot button on the iPad enabling the operator to either connect to ISC via Skype for support or submit a service ticket on the spot.

The Result

For Mohegan Sun at Pocono Downs, ISC has leveraged the customizable On Controls automation and control platform in order to give a thriving sports complex the capability to entertain patrons with HD video content from anywhere in the world. As guests wander the casino or other areas of the facility such as the main simulcasting area, the lounge, the teller line or the clubhouse with its dynamic large displays, they can enjoy numerous events—and their host has efficient and intuitive iPad-based control directing content to banks of screens as races or other events start and conclude.

The Mohegan Sun at Pocono Downs installation is another example of how systems integrators have come to rely upon the On Controls platform to be reliable, customizable and a strong value for their clients worldwide.

About Mohegan Sun

Mohegan Sun at Pocono Downs offers patrons a premium venue to view and wager on live harness racing with the added intrigue of simulcast racing from other tracks around the world that can be viewed live on roughly 200 high-definition screens. With HD video available to patrons in the Live Simulcasting area, the Clubhouse, Lounges, and Teller Line area, the objective was to disperse an array of channels (video feeds of both live and simulcast racing events) evenly for viewing with intuitive iPad-based control. International Sound Corporation (ISC) of Hialeah, Florida utilized an On Controls platform to deliver precisely what the client desired.

About On Controls

On Controls brings the convenience, luxury and security of advanced control and automation technology for residential and commercial applications to the Apple and Android phones and tablets already familiar to millions of users.

An award-winning Wi-Fi-based platform, On Controls leverages the efficiency of the cloud, enabling integrators to deliver more features and better service to their commercial and connected home clients. From a single room to the largest applications, On Controls allows integrators to initialize, upgrade, add new features and sync remote setups to a client's tablet or phone via a web portal from anywhere in the world. On Controls is an intuitive, reliable, robust, and reboot-free system that will simplify your life!
