

FOR IMMEDIATE RELEASE

AudioControl Introduces the SA-4140i High SPL Acoustical Measurement Microphone

The SA-4140i is a high SPL full-range solution that includes everything you need to take accurate measurements using the latest iOS phones or tablets sans headphone jacks

Seattle, WA, January 16th, 2017 – AudioControl (audiocontrol.com), designers and manufacturers of innovative high-performance audio solutions for the residential, commercial and automotive markets has unveiled the SA-4140i high SPL full-range acoustical measurement microphone. The SA-4140i incorporates critical electronic functions into the body of the microphone such as an analog to digital converter, preamplifier and calibration data, eliminating the need for headphone jack connectivity—particularly useful on the latest generation iOS devices. The SA-4140i is capable of handling up to 140 decibels of sound pressure level and is ideal for automotive or residential/commercial environments.

The SA-4140i is an omnidirectional microphone designed specifically to integrate with the [AudioControl Mobile Tools app](#) on Apple® iOS devices (running iOS 5.0 or later). The SA-4140i is the perfect instrument for taking acoustical measurements, enabling precise tuning of high-performance audio systems in cars, boats, homes or nearly any environment imaginable. The AudioControl Mobile Tools app helps to visualize what you are hearing in order to achieve professional results in all audio system installations.

The SA-4140i microphone has a built-in 3.5-millimeter headphone jack, enabling technicians to gain easy access to the test tone even when using the latest generation of iOS devices that do not come equipped with a headphone jack. The SA-4140i comes factory calibrated by AudioControl and has a frequency response of 20 HZ - 20 KHZ +/- 3 DB. It is compatible with the Apple® iPod® touch, iPhone® and iPad®. MSRP for the SA-4140i is \$299 and it will become available February 1st, 2017.
