

FOR IMMEDIATE RELEASE

Bryston Launches BP-17³ Preamplifier

New preamp is the first to employ patented Salomie input circuit and new feature set with highly flexible input/output array

Peterborough, Ontario August 7th, 2017 – Bryston has announced the introduction of the new BP-17³ (Cubed Series) preamplifier, utilizing patented technology that debuted on the much heralded Cubed Series amplifiers. The BP-17³ also features a new expanded input/output configuration for enhanced system flexibility. Like all analog components from Bryston, the BP-17³ is covered by an industry best 20 year warranty.

Bryston's patented super-linear, low noise input buffer jointly developed by Bryston and the late Ph.D. engineer Dr. Ioan Alexandru Salomie significantly reduces noise and distortion. The BP-17³ also has improved RF and audio frequency noise filtering to prevent unwanted anomalies on the power line from interfering even minutely with the audio signal.

The BP-17³ offers expanded input/output options, including two pairs of XLR outputs and two pairs of RCA outputs, making it possible to connect a wide variety of equipment and accommodate numerous system configurations. An RCA tape loop lets users connect a line-level processor or recording device and one of the XLR output pairs can be internally selected to have either variable (default) or fixed output enabling users to easily connect a Bryston BHA-1 or other balanced input headphone amplifier. The BP-17³ also includes two pairs of balanced inputs and five pair RCA inputs, and can be ordered with a high-resolution internal DAC, a premium moving magnet phono stage, both DAC and phono modules or without either module installed. Users can select sources, adjust volume and more all from the optional BR-2 remote control or via RS232 connection to virtually any control ecosystem. The BP-17³ is available in either black or silver, 17-inch or 19-inch (wide) faceplates.

The BP-17³ will begin shipping to authorized dealers in September, 2017 with a US MSRP of \$3995. The DAC and phono stage options have an MSRP of \$750 each. The BR-2 remote has an MSRP of \$375.

Pre-order special:

Customers that place a pre-order for the BP-17³ by August 31st will qualify for one optional accessory at no additional cost: Choose from an internal phono stage, internal DAC or BR-2 remote control.

About Bryston: Bryston (bryston.com) first opened for business in 1962 as a manufacturer of medical equipment. The company was purchased in 1968 by John W. Russell, an ex-NASA engineer. Together with sons Chris, Brian and John D., they first started exploring the field of accurate, reliable audio amplification in the early 1970s. Since that time Bryston has become legendary for their hand-built quality, superb performance and dependability under load in the home, professional and commercial markets. Bryston amplifiers are used in some of the world's most renowned recording studios and owned by many discerning music professionals. Bryston applies precision manufacturing techniques and materials in the assembly of their electronic equipment that are more typically utilized by the military and aerospace industries. Bryston is based in Peterborough, Ontario Canada, northeast of Toronto, and is sold through over 150 dealers in North America and 60 countries worldwide.
