James Loudspeaker™ Unveils Two Compact High-Performance Boundary Speakers

New W-Series models leverage new woofer and Quad Tweeter to deliver astonishing detail and clarity from a smaller, fully customizable form factor

Napa, CA, June 26th, 2018 – James Loudspeaker (www.jamesloudspeaker.com), designers and manufacturers of the highest quality décor-friendly entertainment products for both residential and commercial applications, has introduced two smaller versions of their popular W-Series wedge form factor boundary speakers designed for integration where walls and ceilings converge. The unobtrusive 42Qw and 43Qw offer superb performance for multi-zone audio, height channels for immersive theater systems (Atmos, Auro3D and DTS:X) and outdoor audio applications as well. Both new models are constructed of aircraft grade aluminum for strength, sonic performance and durability. An aluminum perforated grille is included to provide years of trouble free use.

New Technology

The 42Qw and 43Qw employ a new version of the high-excursion 4-inch woofer originally used in the 42AT landscape loudspeaker, designed using a Santoprene™ surround and aluminum cone. The 42Qw combines a single 4-inch woofer with James Loudspeaker's legendary aluminum Quad Tweeter array, providing superior dispersion and dynamic capabilities verses conventional speakers. The 43Qw utilizes two of the 4-inch drivers with the Quad Tweeter for additional output capability.

“Though our larger boundary speakers have been very popular, we received feedback from both residential and commercial integrators that a more compact version of the W-Series speakers would be useful,” reported James Loudspeaker CEO Mark Schafle. “Our goal is to provide the highest performing entertainment solutions that deliver superior sound with minimal visible intrusion into the space.”

Both W-Series models come with a wall/ceiling bracket featuring a unique mounting system that is ultra-secure but easy for custom integrators to work with and achieve a gapless fit every time. Like all James Loudspeaker products, both standard and custom colors are available.

Beautifully Made in USA

James Loudspeaker W-Series speakers are built from elegant aircraft-grade aluminum for strength, sonic performance and durability when used for outdoor or marine applications. Each speaker features a proprietary aluminum cone woofer and an aluminum dome Quad Tweeter for unsurpassed dispersion and musicality. All W-Series speakers can be custom painted to match any décor and each speaker comes with a matching aluminum perforated grille. Like all products from James Loudspeaker, W-Series speakers are fully customizable to suit any commercial or residential application.

The James Loudspeaker 42Qw and 43Qw are available now through authorized James Loudspeaker integrators. MSRP pricing is \$900USD (42Qw) and \$1100USD (43Qw) each.
