

FOR IMMEDIATE RELEASE

AudioControl to Unveil Game-Changing Amplifiers Featuring 70/100 Volt Outputs, DSP Control and more Integrator Focused Solutions at ISE 2019

Award-winning new 70/100v amplifiers, a unique approach to 4-channel theater amplification, voice activation added to the legendary Rialto 400 and more surprises continue the trend of fine products and innovation that have made AudioControl the preferred choice of integration professionals

Seattle, WA, January 22nd, 2019 – AudioControl (audiocontrol.com), makers of innovative high-performance audio solutions for the residential, commercial and automotive markets will be expanding their amplifier offerings with the introduction of their new CM line of 70/100-volt amplifiers along with other important new product introductions detailed below at **ISE 2019, Booth 5-R96**.

Award Winner

Since its debut, AudioControl's CM-750 amplifier has received prestigious acclaim such as the 2019 Consumer Technology Association TechHome[®] Mark of Excellence Award and the 2018 Technology Integrator EXC!TE Awards for Excellence in Custom Installed Technologies and Electronics.

Finest Solutions Available

AudioControl's made-in-USA CM-Series 70V/100V amplifier solutions, delivering 750 watts per channel all-channels-driven, enable integrators to deliver superior quality entertainment content through a large number of speakers connected to each output—addressing nearly any system configuration. This flexibility is particularly useful to integrators when assembling a premium outdoor audio system as well as a large variety of residential and commercial audio/video applications. AudioControl's new CM Series 70V/100V-volt amplifiers are unique because unlike competitive solutions, they offer the DSP control and signal matrixing capabilities, enabling integrators to precisely tailor the sound by zone to any environment. Additionally, CM Series amps support dual mode functionality, enabling simultaneous 70-volt and 8-ohm operation on selected channels—plus digital and analog audio inputs, delivering the highest-degree of flexibility in the category.

Versatile Theater Amplifier

The latest addition to AudioControl's line of theater amplifiers is the new Avalon G4, a versatile high-performance 4/3/2 channel amplifier capable of driving the height channels as part of an immersive surround system (4-channel – 230 watts @ 8 ohm, 300 watts @ 4 ohms) or a 2.1 audio system (stereo pair plus bridged pair) as well as a dedicated 2-channel music system delivering 600 watts bridged into 8 ohm loudspeakers. Each pair of channels features hi/lo/bypass crossover controls, balanced (XLR) and unbalanced (RCA) inputs as well as RCA throughputs to achieve multiple configuration options. The 2U rack space Avalon G4 also features independent channel level controls, premium 5-way binding posts and switchable 110/220-volt operation.

Rialto 400 Goes Faster With Voice Activation Connectivity Option

AudioControl's new Rialto 400 features a smart-switching auxiliary input capable of overriding both digital and analog inputs when it senses signal. This enables the user to query using voice commands on Amazon Echo or Google Voice and rely on the Rialto 400 to pause either input, provide the response from either automated device and immediately switch back to whichever input was active.
