

FOR IMMEDIATE RELEASE

AudioControl Introduces the Avalon G4 — a High-Performance 4/3/2 Channel Amplifier

Highly versatile multichannel architecture ideal for everything from immersive surround sound applications to multi-zone audio, 2-channel or 2.1-channel entertainment systems and more!

Seattle, WA, May 2nd, 2019 – AudioControl (audiocontrol.com), makers of innovative high-performance audio solutions for the residential, commercial and automotive markets has introduced the Avalon G4, a fully configurable 4, 3 or 2-channel amplifier ideally suited for any residential or commercial audio application. The sleek, 2U rack space Avalon G4 is highly versatile, capable of operating as a 4-channel, 3-channel or 2-channel amplifier configurable instantly via rear panel controls. The AudioControl Avalon G4 is the ultimate amplifier solution for integrators building premium A/V systems for their clients.

Pristine Performance from a Class H Design

The AudioControl Avalon G4 delivers exceptional detail and clarity thanks to an innovative and highly efficient Class H design that effortlessly achieves 230 watts/8-ohms or 300 watts/4-ohms into four channels all channels driven. The Class H design topology provides superb audio quality and bullet-proof reliability while reducing heat dissipation from a compact form factor. The Avalon G4 also features AudioControl's LightDrive™ anti-clipping protection circuit, which protects loudspeakers from clipping and distortion even in extreme conditions such as a highly dynamic action movie soundtrack. On the Avalon G4, each pair of channels features hi/lo/bypass crossover controls, balanced (XLR) and unbalanced (RCA) inputs as well as RCA throughputs to achieve multiple configuration options. The Avalon G4 also features independent channel level controls, remote power control triggers, audiophile-grade 5-way binding posts and can be ordered for either 110 or 220-volt operation.

All in the Family

The Made in USA Avalon G4 has been designed as a perfect match to AudioControl's Maestro M9 and M5 cinema processors and is ideally suited for immersive surround formats such as Dolby Atmos® or as a premium standalone power amplifier for nearly any multi-zone entertainment system. The Avalon G4 can be easily configured as a powerful 2-channel amplifier (600 watts into 8 ohm loudspeakers) or as a 2.1 solution for residential or commercial A/V systems.

The AudioControl Avalon G4 has a suggested client price of \$1960 USD and is available now.
