

**FOR IMMEDIATE RELEASE**

## **Savant® Introduces Field-Configurable Echo Style Keypads**

*New keypad style, easy Savant Scene creation and keypad design tool add vital features and increased efficiency for integrators*

**HYANNIS, MASS. May 21<sup>st</sup>, 2019** — Savant, a leader in smart home technology, has introduced a new keypad family that adds field-configurability from three to six buttons along with the ability to configure backlight color. Available in both low voltage and line voltage versions, Savant's new Echo style keypads can control lighting and more within the Savant control ecosystem.

Savant Echo style keypads are available in ten different button configurations and three finishes, and have been engineered to be easily read from standing height. Echo keypads are designed to fit in a standard-sized opening making them compatible with an array of decorative faceplates to suit any décor. Adding further customization, the backlit engraving can be set to one of nine different colors. A built-in ambient light sensor automatically adjusts brightness based on the amount of light in the room and includes Wake Mode to increase backlit button brightness when a person approaches.

### **Savant Control**

New Echo style field-configurable keypads from Savant can control lighting as well as audio, video, shades, climate and more. These premium keypads also include the option for Savant's classic, easy-to-use dial for dimming or volume control.

For the ultimate in flexibility and convenience, any Savant Scene that is created in the Savant Pro App can be easily assigned to a button on any Echo or Metropolitan style keypad. This can be done by the integrator during initial system set-up or anytime by the homeowner when adjustments are needed and the integrator has unlocked feature-access.

### **Integrator testimonial**

*iQuarters has enjoyed deploying Savant Lighting for our customers because it gives us tremendous flexibility with individual users. In the past, we have had to hard-code favorite music stations or TV channels into a keypad button and if the application changes, it requires additional programming time. With Savant Lighting, we can simply check a box during setup that allows our client to adjust their music favorites, light configurations and Savant Scenes in the Pro App all from within in a familiar setting. When they experience the dynamic nature of their system in this way, they are impressed and feel empowered by the technology. They often ask us to unlock access to this feature on additional keypads.*  
Mike Brander, iQuarters, New York

### **Keypad Design Tool**

Continuing to deliver integrators with flexible, web-based tools, Savant has introduced the new Keypad Designer. This design tool is available to all Savant Integrators from the Savant Store and allows for an integrator to not only design keypads and order engraved buttons, but to also assign keypads to rooms so that all location data can be printed on the keypad box for easy installation.

New Savant Echo Keypads are available now.
