

FOR IMMEDIATE RELEASE

AudioControl Set to Conquer the 2019 CEDIA Expo

Show attendees will see the most new products ever unveiled by the company along with prominent booth partners throughout the show utilizing AudioControl products

Seattle, WA, August 29th, 2019 – AudioControl (audiocontrol.com), makers of innovative high-performance audio solutions for the residential, commercial and automotive markets will be showcasing their outstanding and extensive new product lineup at the 2019 CEDIA Expo in Denver. Attendees are encouraged to come to booth 1813 to see a completely new line of home theater products, 70-volt amplifiers and much more.

Complete Line of New Home Cinema AVRs and Processors on Display

AudioControl will be introducing three new immersive audio receivers (AVRs) and two new immersive audio preamp/processors at CEDIA. All units feature advanced Dirac room correction and all popular surround formats, including AURO 3D on all but the entry AVR. These units feature a stunning industrial design as well as 16 channels of output, integrated web-based configuration, intuitive app-based control, Google Cast, Airplay 2, aptX Bluetooth, WiFi streaming connectivity and much more!

G4 Series Amplifiers

AudioControl will be showcasing the new RS Series subwoofer amplifiers (500 and 1000-watt mono amplifiers with DSP), and new G4 Series amplifiers (5 and 7-channel versions) that provide the high power theater enthusiasts demand for a lifelike surround sound experience. All amplifiers are built on AudioControl's unique Class H topology, which provides authoritative power and unmatched clarity without generating excessive heat. The new models all share the sleek cosmetics to the recently unveiled 4/3/2-channel Avalon G4, providing theater designers and A/V integrators with the most advanced theater amplifier lineup engineered for every system architecture—from a fully immersive Dolby Atmos[®] system to a 5.1 or 7.1 system configuration.

SDS Super-Smart Switch

AudioControl will be adding a new smart software feature to their award-winning, multi-zone Director Series and CM Series amplifier lineup called SDS switching (Signal Detecting Switch). Unlike any other multi-zone amplifier solution, the SDS feature will enable users to seamlessly interact with voice command agents, doorbells, paging systems and more. Integrators will be able to customize the functionality to suit each client by defining which zones are part of the designated group that will respond to the SDS input, related input volume levels for each zone, and more.

CEDIA Partners Choose Only the Very Best

AudioControl has been recognized by numerous manufacturers in the CEDIA community as a provider of best-in-class multi-zone entertainment amplifiers, home cinema amplifiers, AVRs and processors. Rayva, a designer of premium theater packages, has chosen to partner with AudioControl to demonstrate a best-in-class theater system at CEDIA using AudioControl processors and amplifiers. The demo will be located within the Origin booth #3837. The

following manufacturers will also be utilizing AudioControl products as part of their 2019 CEDIA booth displays:

- *Origin Acoustics*
- *Totem Acoustics*
- *Dynaudio*
- *Stealth Acoustics*
- *Savant*
