

FOR IMMEDIATE RELEASE

AudioControl Announces Celebrity Booth Appearance at CES 2020

Rick Harrison from the World-Famous Gold and Silver Pawn will be in the AudioControl booth along with his 1947 Dodge Power Wagon powered by AudioControl amplifiers

Seattle, WA, January 2nd, 2020 – AudioControl (audiocontrol.com), has announced that Rick Harrison from the World-Famous Gold and Silver Pawn and reality TV fame will be showing off his 1947 Dodge Power Wagon, with a new sound system featuring AudioControl amplifiers, at AudioControl's **CES Booth, 3921**. Harrison will be in the booth to meet with show attendees and sign autographs on Wednesday, January 8th at 1PM. The Power Wagon audio system features the 6-channel AudioControl D-6.1200 DSP-enabled amplifier powering an active 3-way front speaker system. AudioControl's DM Smart DSP was utilized to fine-tune the full stage and attain the highest levels of clarity and detail. The subwoofer is driven by AudioControl's mighty 1500 Watt LC-1.1500 mono amplifier.

Many New AudioControl Products at CES

The AudioControl CES booth will feature many new products that deliver performance for car audio enthusiasts and create unique opportunities for 12-volt specialists. Show attendees will see two new 5-channel amplifiers from AudioControl that both offer 200 Watts RMS X4 @ 2-Ohm (125 Watts X4-channels RMS @ 4-Ohm) and 500 Watts X1-channel @ 2-Ohm along with eight speaker level inputs with selectable summing capability. The D-5.1300 delivers onboard DSP control of all amplified outputs and a pair of low-level outputs as well. The DSP interface is managed by the highly intuitive DM Smart App designed for all of AudioControl's DSP amplifiers. The LC-5.1300 offers the same outstanding specs and performance without the DSP features. Additionally, AudioControl will proudly unveil the company's first ever marine/motorsports amplifiers, designed to deliver outstanding audio performance with the rugged durability required for high-humidity applications. AudioControl will also be showing many new OEM interface solutions to enhance their LC and LGD series solutions that offer unparalleled performance, are more flexible and easier to use. All new products on display at **CES Booth 3921**.

DM-RTA

Also on display in booth 3921 will be the groundbreaking DM-RTA, a one-of-a-kind sophisticated yet compact audio analyzer containing powerful analysis software designed to provide installers with the features of a fully functioning Oscilloscope, Voltage Meter, Real Time Audio Analyzer (RTA), SPL Meter and Polarity Checker. Because installers are often on-the-go and in cramped spaces when building a car audio system, the AudioControl DM-RTA was designed to be light weight, compact and durable. Input/output options are staggering, including balanced XLR inputs, phono and RCA style unbalanced inputs as well as speaker level inputs designed to make OEM audio system interface a snap. Digital audio output options include Optical, COAX and USB. The DM-RTA is powered by a 5-hour rechargeable battery so that it can be effortlessly deployed anywhere.
