

FOR IMMEDIATE RELEASE

AudioControl Introduces The ACR-U Universal Volume Control

The ACR-U audiophile-grade level control is ideal for countless applications including OEM system upgrades, subwoofer level adjustment, zone volume control for marine installations, and more

Seattle, WA, February 16th, 2022 – AudioControl (audiocontrol.com) has introduced the ACR-U universal volume control, the ultimate premium performance, highly-durable level control that will improve the performance and user experience for OEM audio upgrades, classic car entertainment systems, marine audio installations and more.

Introducing The ACR-U Universal Volume Control

The innovative ACR-U universal volume control offers the superb performance and ease of installation that installers have come to expect from AudioControl. The ACR-U is a passive control (requires no power) and takes RCA audio inputs into a compact receiver that connects to the volume control via standard Ethernet cable for wire runs up to four hundred feet with zero loss—ideal for luxury yachts and other large-scale projects. An ideal solution for a great many applications, the ACR-U delivers flat response even in the bass region, not suffering from extraneous noise, voltage drop or premature roll-off that plague lower quality solutions. Users will appreciate that the ACR-U is a linear control, offering a smooth, even increase/decrease in output with the rotation of the knob. The ACR-U has been conformal coated for durability against the elements and comes complete with a standard-length Ethernet cable. An optional extended-length Ethernet cable is available. The AudioControl ACR-U is available now and shipping to dealers.

Key Solutions for 12V Dealer and Installers

AudioControl offers class-leading audio products engineered for car, marine and mobile sports applications, plus ultimate-performance OEM interface solutions that enable 12-volt dealers to upgrade sound systems while keeping the factory in-dash systems in place. These products are vital for automobiles featuring integrated multi-media systems that cannot easily be replaced. For 45 years, AudioControl has established the benchmark for performance and reliability, delivering the 12-volt audio products and support services dealers and installers must have to be successful.
