FOR IMMEDIATE RELEASE

AudioControl Showcases Exciting New Products at the 2023 ISE in Barcelona

Booth exhibits include 8K home theater products, plus ultimate performance high-power amplifiers engineered for the CI channel, and much more…

SEE ALL THE NEW PRODUCTS BY VISITING AUDIOCONTROL AT THE 2023 ISE, BOOTH 2K300 Jan. 31 - Feb. 3, 2023

Seattle, WA January 23rd, 2023 – AudioControl (audiocontrol.com) will be celebrating 45 years of providing best-in-class A/V solutions to the finest A/V professionals worldwide and displaying their newest premium home entertainment solutions to attendees at the 2023 ISE show in Barcelona, Spain. The AudioControl booth will include 8K home theater products, a groundbreaking, powerful new 70-volt amplifier technology with available Dante network connectivity, and innovative solutions to support the CI installer.

8K Home Theater
AudioControl Home theater products are the definitive choice for specialists looking to deliver best-performing systems to their clients. New versions of their lineup X-Series immersive processors and receivers feature HDMI 2.1 with HDCP2.3 support and accept 8K signals. These ultra-premium 16-channel immersive audio preamp/processors and AVRs enable home theater specialists and A/V integrators to create systems that deliver new levels of precision, power, and control. They also support the most sought-after immersive surround formats and advanced room correction to accommodate every project and the most discerning enthusiasts. All these features and outstanding technology has been elegantly wrapped within a beautiful, modern industrial design, distinguishing AudioControl's home cinema preamp/processor lineup from any other solution.

The Architect Model P250EQ Amplifier
The AudioControl Architect Model P250EQ, a high-power 2-channel amplifier engineered with an emphasis on sound quality plus key features for the custom installation channel, will make its European debut at the 2023 ISE show. The P250EQ only requires a 1U rack space yet delivers the performance and functionality of much larger solutions. The foundation of the AudioControl P250EQ is the company's Constant Power Mode amplifier design that provides exceptional clarity and balance into any loudspeaker. Output power is 250-Watts per channel into 8, 4 and 2-Ohm loads. Integrators will appreciate the impressive array of inputs designed to accommodate every application, plus three selectable EQ curves, engineered to enhance the performance of commonly deployed architectural loudspeakers.

CM Series 70-Volt Amplifiers with Optional Dante Connectivity
AudioControl CM Series amplifiers have established a new standard of performance in the realm of 70-volt amplifiers. The CM Series amps use a highly sophisticated Constant Power Mode architecture featuring GaN (Gallium Nitride) semiconductors—a groundbreaking circuit engineered by AudioControl to deliver more output power, greater efficiency, and superb sound

quality—far surpassing the performance of conventional 70-volt solutions. CM Series amplifiers feature optional Dante digital audio networking capability (available later in 2023) along with the flexibility of both 70-volt and 4/8-Ohm (Dual-Mode) compatibility. These ultimate-performance amplifiers are ideally suited for commercial and residential A/V installations, delivering best-in-class audio performance, legendary build quality, channel matrixing and a powerful, intuitive DSP engine that is second to none.

Director Series Amplifiers—the Ultimate Entertainment Solution for CI Professionals
AudioControl's award-winning Director Series amplifiers deliver the ultimate entertainment experience when performance matters. Director Series amps offer the features integrators must have to provide unrivaled audio performance across any size the music system, including 100 watts/8-Ohms, 200 watts/4-Ohms per channel into 16-channel and 8-channel models. Director D Series and M Series models feature a powerful DSP engine that includes graphic and parametric equalization by zone. Director M Series amps are equipped with a switching matrix, delivering the highest quality entertainment programming to any zone with unmatched flexibility.

With Director Series amps, integrators can tailor the sound based on DSP profiles of leading speaker brands as part of AudioControl's Sound Partners Program, and then fine-tune the sound by individual zones. AudioControl Director Series amplifiers can be used as a standalone solution or as part of a complete smart home environment with drivers available for popular 3rd party control systems including Crestron, Savant, RTI and Control 4. Most critically, AudioControl has provided integrators with the flexibility to deliver 8-channels of premium performance from a 1U (M4800) or a 2U shallow (M4840) chassis to accommodate nearly any system configuration. Two 2U 16-channel amplifiers (M6400, M6800) round out the Director M Series lineup.

Celebrating 45 Years at the 2023 ISE
AudioControl has a 45-plus year history of creating award-winning Made in USA products for integrators worldwide and backing them up with superior customer service as well as a 5-year warranty. AudioControl engineers and manufactures best-in-class solutions for the Custom Integration channel.
