

**FOR IMMEDIATE RELEASE**

## **SAVANT Introduces AI-Driven Intelligent Wireless Network**

*Savant Smart Network leverages an exclusive partnership with Juniper Networks, delivering the most advanced networking ecosystem as the foundation of a seamless smart home experience.*

**HYANNIS, MASS. May 4, 2023** — Savant®, a leader in smart home and smart power, has introduced the Savant Smart Network, the only learning wireless network solution leveraging Juniper Mist Wi-Fi technology designed for smart home integrators. Savant Smart Network has been engineered to deliver the best long-term wireless experience for homeowners, coupled with a more efficient deployment and service model for integrators.

“We’re thrilled to partner with Juniper to bring an industry-first solution to market delivering both integrators and homeowners a truly unique, smart wireless network solution,” said JC Murphy, President of Savant. “The best possible smart home experience can only be achieved when it is connected to a reliable and strong signal and the Savant Smart Network raises the bar on what both a homeowner and integrator should expect from their network performance.”

### **Better Networking Through AI and Analytics**

The Savant Smart Network redefines home networking by applying artificial intelligence (AI) and powerful cloud-based analytics to create a learning ecosystem that achieves optimal wireless performance throughout the home. Created in partnership with Juniper Networks, a leader in enterprise-grade networking, Savant Smart Network uses a combination of Wi-Fi 6 or Wi-Fi 6E access points from Juniper Networks. Paired with a Savant Smart Networking Subscription, each Savant Smart Network utilizes Juniper’s Mist Cloud, artificial intelligence, machine learning, and data science techniques to optimize user experiences in real time.

A Savant Smart Network is always working and offers analytics that are much faster and more precise than human data analysis. User privacy and security is always paramount—no user data is captured or stored in the cloud. A direct integration with Juniper’s Mist AI allows Savant integrators exceptional visibility into the user experience through customizable Service Level Expectation (SLE) metrics which are now accessible in Savant Central Management.

### **Best Performance and Greater Efficiency for Integrators**

The Savant Smart Network delivers unparalleled automation and dramatically simplifies deployment of even the most complex wireless networks, saving integrators time and money. Powerful analytics provide instant root cause analysis and real-time user metrics, enabling integrators to differentiate their businesses by delivering significantly faster customer service to their clients. Users will benefit from a network infrastructure that is more predictable, reliable, and measurable.

Savant’s Smart Network is available now.
