AVPro Edge Introduces the Ultimate Video Tiling Solution

The new AC-MV-41 high-performance 4K processor effortlessly consolidates up to four HDMI signals into a single, customizable display.

SIoux FALLS, S.D., April 4th, 2024 – AVPro Edge (www.avproedge.com) has introduced the AC-MV-41 four input HDMI Multi-Viewer, providing integrators with the ultimate tiling solution for delivering as many as four separate HDMI 2.0 video sources simultaneously on any size monitor, television, or projector. The AVPro Edge AC-MV-41 is available now.

“With flat panels now well over 100-inches in size and laser projectors significantly larger than that, the AC-MV-41 enables users to enjoy up to four programs simultaneously with outstanding clarity and detail,” explained Matt Murray, CTO at AVPro Edge. “The AC-MV-41 has been engineered and manufactured with great precision, benefiting from the build quality and performance that integrators have come to expect from AVPro Edge.”

Customized Tile Layouts

The AC-MV-41 offers customized tile configurations with recallable presets, such as a primary picture with a “keep tabs” box in the corner, a quad-view with four equally sized windows, or custom layouts featuring window tiling arrays limited only by the user’s imagination.

HDMI 2.0 Support: The AC-MV-41 is HDMI 2.0 compliant, with HDCP 2.3, for all four inputs and the solo HDMI output. Sources may include SD, HD, and Ultra HD up to 4K/60 fps and safely be combined into a single image for playback on the dedicated display. AVPro Edge’s renowned EDID management eliminates interface challenges, so systems function perfectly every time.

Perfect Solution for Residential and Commercial Applications

The AVPro Edge AC-MV-41 can be used as a standalone solution or as part of a smart ecosystem, with input switching controlled by most popular third-party control platforms. Each input on the AC-MV-41 features an HDMI loop-out to provide creative expansion capabilities with additional units or to pass source signals through for broader distribution, through a solution such as an AVPro Edge MXnet ecosystem.

The AC-MV-41 is designed to be equally well-suited for high-resolution commercial projects, such as security, factory robotics monitoring, or countless other applications that demand superb image fidelity. IP and RS-232 commands from control systems are processed through the LAN and RS-232 ports, with Control 4 and Crestron drivers available for immediate use.

AVPro Edge products feature superior design and manufacturing and are backed by a 10-year advance-replacement warranty, providing integrators with peace of mind knowing they have installed a product that has been built to last from a trusted manufacturer committed to the pro A/V channel.
