AVPro Edge

AVPro Edge will be showing their latest HDMI and USB connectivity solutions and their award-winning MXnet A/V over IP ecosystem—all invaluable tools for AV integration pros. MXnet is flexible, expandable, and is designed for A/V integrators, so it is highly intuitive to deploy. MXnet easily accommodates additional devices on the network such as control systems, streaming, security, gaming, and more. As part of the ConferX line of professional audio video products, AVPro Edge will be showing a low-profile, single gang, HDMI/HDBaseT wall plate transmitter that is perfectly suited to EU-style backboxes. These new versatile wall plates simplify installations in schools, offices, conference rooms, and more. AVPro Edge products feature superior design and manufacturing and are backed by a 10-year advance-replacement warranty, providing integrators with peace of mind knowing they have installed a product that is compatible with a broad range of control systems and has been built to last—all from a trusted manufacturer committed to the pro A/V channel.

AudioControl

Bijou Series: AudioControl will present the brand-new Bijou series of integrated eARC amplifiers, addressing the growing demand for audio enhancement to support large-screen TVs, micro-LED wall installations, and many other professionally installed entertainment system applications. Combining compact design with state-of-the-art technologies like integrated eARC connectivity, unrivaled GaN amplification, and Dante networking, the three Bijou amplifier models have been engineered from the ground up to provide professional AV installers with robust, versatile solutions for both new installations and system upgrades, delivering unparalleled sound quality for any space.

Hyperion Series: AudioControl Hyperion series is a revolutionary line of home theater processors and receivers that redefine immersive entertainment. Hyperion has been designed from the ground up to meet the needs of professional AV integrators, fusing AudioControl's legendary audio expertise with best-in-class video and networking technologies from AVPro Edge. Hyperion is a full-featured 16-channel theater preamp that includes the latest immersive processing, balanced outputs, and endless routing capabilities to achieve unparalleled sonic

performance, reliability, and flexibility. Hyperion empowers integrators to create bespoke audio systems without being constrained by predefined configurations and settings. Outstanding features include onboard network switches that reduce wiring complexity, freeing installers from relying on either Wi-Fi or an outboard network switch for device connectivity. These switches also include a Dante port that enables any audio source connected to a Hyperion system to be distributed throughout the home. Featuring the most robust HDMI management and pre-processing technologies in its class, including the first 48Gbps HDMI chip, Hyperion delivers an unmatched AV entertainment experience. Hyperion models offer GaN amplification, the most advanced DACs, and video processing as only AVPro can deliver.

Murideo

Murideo STIX generators and analyzers are an essential 720P to 8K HDMI 2.1 (48 Gbps) end-to-end testing solution that includes two small form factor devices: the STIX MU-STIX-G signal generator and the MU-STIX-A analyzer. Users can generate and analyze EDID, HDCP, 8K video, and manage testing for small switching or point-to-point distribution deployments. The STIX solution is also ideal for manufacturing, new product development, and/or quality control applications. The performance, compact size, and flexibility of the STIX system make it ideal for AV professionals managing designing, deploying, or maintaining systems for clients in markets such as Hospitality, Digital Signage, Enterprise Solutions, Education, Residential, and more.

Bullet Train Calibrator Series HDMI cables feature 100 percent EMI/RFI shielding, with each of the 19 internal conductors isolated within Kevlar™-reinforced polyethylene insulators. All conductors utilize oxygen-free copper, with 24 AWG for hot plug detect and control channels and 19 AWG, 0.06 tinned copper for FRL signal channels. All conductors are 100% shielded from end-to-end, including through the proprietary anti-EMC headshell, with multiple layers of diagonally crossing, seam-sealing aluminum foil to eliminate channel crosstalk and prevent interference from radiated digital noise. The headshell also features a unique C-locking design that applies maximum junction pressure, optimizing contact with device ports.

Bullet Train Professional Series USB cables offer USB-C to USB-A and USB-C to USB-C variants. From mobile device charging to moving 10 Gbps data or video at the speed of light, Bullet Train USB Professional series cables deliver superior performance, reliability and compatibility. Professional series cables feature high-quality, oxygen-free copper and gold-plated connections for maximum conductivity, eliminating the potential for data loss during signal transfer. Multiple layers of shielding protect against electromagnetic interference (EMI) and radio frequency interference (RFI), guaranteeing stable and reliable connections every time. Up to 15-meter lengths available utilizing hybrid active optical cable featuring Cleerline fiber for data transmission and copper wire for power over longer runs. The flexibility and material of the jackets protects against damage and provides reinforced stress relief for the connectors to prevent overbending and breakage. Bullet Train's Professional USB-C 3.2 Gen 2 gold connectors are precisely machined secure connections, designed to eliminate insertion fatigue to extend the life of the cable. These exceptional USB cables are perfect for professional integrators, videographers, graphic designers, and anyone that requires unflinching system stability with super speed data transfer and efficiency to maintain productivity.
