

FOR IMMEDIATE RELEASE

Murideo Introduces the Groundbreaking STIX 8K HDMI Generator and Analyzer

The STIX Generators and Analyzers are the ultimate flexible and scalable end-to-end testing tool engineered for those who design, install, or maintain AV systems as well as for manufacturers of displays with resolutions from 720P to 8K.

SIoux FALLS, S.D., December 19th, 2024 – Murideo (murideo.com) has introduced the STIX generators and analyzers—an essential 720P to 8K HDMI 2.1 (48 Gbps) end-to-end testing solution that includes two small form factor devices: the STIX MU-STIX-G signal generator and the MU-STIX-A analyzer. Users can generate and analyze EDID, HDCP, 8K video, and manage testing for small switching or point-to-point distribution deployments. The STIX solution is also ideal for manufacturing, new product development, and/or quality control applications.

“The Murideo STIX system is an affordable, extremely powerful HDMI testing tool in a very small, lightweight package that is easy to carry with you,” explained Jim Burns, Product Manager for Murideo. “STIX are HDMI 2.1 devices, delivering 8K 48Gbps support on both the generator and the analyzer. This tool enables technicians to efficiently test deployed solutions, maintaining proper spec and ensuring satisfied clients on every project.”

Game Changing Solution Dramatically Improves In-Field Efficiency

The Murideo STIX testing tool has been designed as a flexible, scalable 8K generator/analyzer to perform PASS/FAIL testing on individual components with resolutions ranging from 720P to 8K. Users can test and analyze switchers, cables, and 8K content for LED display walls. The performance, compact size, and flexibility of the STIX system make it ideal for AV professionals managing designing, deploying, or maintaining systems for clients in markets such as Hospitality, Digital Signage, Enterprise Solutions, Education, Residential, and more.

The Murideo STIX System will be available in January, 2025. Learn more at: murideo.com/stix-pair.html
