

Savant Announces Integration with ClimateMaster Heat Pumps

Savant's award-winning control experience matched with ClimateMaster's geothermal heat pump technology delivers outstanding comfort and energy efficiency throughout the home.

HYANNIS, MASS. March 18th, 2025 — Savant®, a leader in smart home and smart power technology, has announced their native integration with ClimateMaster's class-leading heat pumps, unlocking the convenience and efficiency of Savant's full climate control experience within the Savant App.

Savant users with a ClimateMaster heat pump system will appreciate the vast capability of Savant's HVAC scheduler, creating climate control routines customized to each zone based on time of day, day of week, or day of the year to suit preferred settings across the seasons. And HVAC contractors will appreciate that Savant's native cloud integration enables them to properly configure the heat pump for the residence separate from the customized Savant control setup to be managed by the integrator, creating the best of both worlds for the homeowner. Best of all, Savant's smart climate control matched to ClimateMaster's geothermal HVAC technology delivers an unprecedented level of flexibility and energy efficiency while maintaining a consistent temperature across every room in the home.

“Savant's best-in-class control experience is a perfect match with ClimateMaster's geothermal HVAC technology, providing homeowners with an energy efficient climate system that works in concert with Savant's award-winning energy management solution,” explained Bryce Judd, Chief Revenue Officer at Savant. “Savant's smart panel, flexible load management technology, and award-winning app provide consumers with the means to live both comfortably and efficiently.”

What is a Geothermal Heat Pump?

A ClimateMaster geothermal heat pump uses the consistent temperature of the ground to provide home heating or cooling for indoor comfort. Flexible piping inserted into the earth brings the natural warmth of the ground into the home during cold months, and removes the heat during the summer, transferring that unwanted warmth back into the ground. The end result is a comfortable living space year-round with significantly reduced utility bills when compared to a traditional HVAC system.
