SIOUX FALLS, S.D., August 6th, 2025 – AVPro Edge (www.avproedge.com) introduces new capabilities to the MXnet CBOX-HA. Designed for flexibility and ease, the CBOX-HA now supports three distinct operating modes, enabling it to be the single management platform for various types of AV systems. These modes include MXnet 1G, MXnet 10G or Dante Controller mode. In Dante Controller mode, the CBOX-HA leverages the powerful Dante API (DAPI) for discovery, management, and signal routing of any Dante capable devices, including those from AVPro Edge and AudioControl as well as 3rd party solutions. Coming soon, enabling a CBOX-HA mode will be even easier by incorporating a mode select wizard at initial startup for faster configuration with zero guesswork.

“The new AVPro Edge CBOX-HA is a single box solution that supports both our 1G and 10G MXnet ecosystems, significantly reducing the complexity of AV over IP integrations and upgrades,” explained Matt Murray, CTO at AVPro Edge. “The added flexibility of Dante control and a fast, intuitive setup wizard (coming soon) bring value and efficiency to installers all conveniently housed in a compact chassis.”

AVPro Edge CBOX-HA New Features

- Now supports operating as a 1G or 10G CBOX for MXnet systems.
- Dante Controller mode for discovery, management, and routing of Dante audio systems.
- Compatibility with AVPro Edge, AudioControl, and 3rd party Dante-enabled devices.
- New features and flexibility all housed in the same compact chassis and at the same price.

AVPro Edge products feature superior design and manufacturing and are backed by a 10-year advanced replacement warranty, providing integrators with peace of mind knowing they have installed a product built to last from a trusted manufacturer committed to the Pro A/V channel.
