

New Savant Initiative Features Enhanced Integrator Access, Streamlined Programs, and Transformative AI, GE Proseo, and Energy Solutions

Company doubles down on effort to help integrators maximize profits and expand new business

PLEASE VISIT SAVANT AT THE 2026 CEDIA EXPO SEPTEMBER 1-4 IN DENVER, BOOTH 2518

HYANNIS, MASS. — August 20, 2026 — Savant, a global leader in smart home and power, today announced it is launching a new era of more accessible dealer programs combined with easy-to-setup and scale AI, lighting, shading, and energy products that will help integrators unlock new opportunities and achieve their growth goals. Industry professionals can learn more about the comprehensive program at CEDIA Expo 2026. The annual event takes place September 1–4 in Denver, Colo.

“Since 2005, we’ve been committed to delivering exceptional value to integrators through cutting-edge, reliable smart home solutions that push the boundaries of innovation,” said JC Murphy, Chief Commercial Officer at Savant. “We’re continuing to enhance and grow our suite of advanced Savant technologies, while also streamlining licensing and software models, expanding access and affordability, and simplifying setup and service to help them realize operational efficiencies, scale current projects, and win new business.”

This fall, Savant will launch SavantOS 12, which will standardize the company's software offering into a single, unified platform. The update gives integrators multiple entry points into the Savant smart home and flexible scalability across the entire product lineup, so projects of any size can run on the same foundation. SavantOS 12 also packs additional value into Savant Essentials, Savant's subscription-based service, and lays the groundwork for a new conversational user experience powered by Savant AI.

Savant AI

Over the last several years, Savant has been investing in artificial intelligence (AI) to enhance its capabilities. Soon to become available via a subscription model, the intelligent companion can educate users on smart home capabilities and recommend and execute experiences that will revolutionize the way Savant AI users interact with their living spaces.

AI will also simplify and transform the way Savant integrators do business. From easier in-app setup and a streamlined configuration process to service and support, Savant AI will be a powerful partner throughout a project’s lifecycle. It will give integrators an advantage that will save time, reduce complexity, increase profitability, and pursue opportunities that were previously out of reach.

GE Proseo Lighting & Shades

The depth and breadth of Savant’s expanding GE Proseo portfolio provides flexibility and ensures that dealers can access best-in-class solutions for every room in any project. Highlighted by the new affordable dual-purpose keypad host that serves as both a light switch and a smart home hub, reliable Proseo solutions can deliver as an integrated whole-home smart platform or a standalone solution for luxury, mid-level, or entry-level residences.

Other Proseo solutions include a growing family of in-wall control solutions, new professional grade modular downlighting portfolio, undercabinet fixtures, and indoor and outdoor light strips. Proseo Inception and R Series shades help Savant dealers bring effortless control, comfort and style to every room, with a versatile range of options designed to complement virtually any home.

Savant Power

The ability to bring Savant intelligent energy management, backup power, and load control into the home is creating new business opportunities for dealers to engage homeowners around resilience, efficiency, and energy independence. For example, the new Savant Smart Panel is a groundbreaking electrical panel that provides homeowners with real-time insights into energy consumption, while allowing them to control where and when grid, solar, generator, or stored power is used to maximize energy savings and ensure optimal performance throughout the home.

Savant is also expanding its home battery portfolio with Savant Power Storage G2 and new software that turns existing Savant Power Storage units into a large-format Double Online Conversion UPS. G2 brings a UL9540A fire rating, an outdoor-ready heated battery cabinet, and a simplified universal enclosure with self-serve firmware, while the new Double Online Conversion software delivers standalone, twin-inverter battery backup with pure sine-wave power for critical and high-performance applications.

CEDIA Expo 2026 attendees can engage with company representatives and learn more about Savant's evolution at Booth 2518. Savant authorized dealers have been invited to an exclusive off-site event at the local Populus Denver hotel where they can participate in a Savant AI demo and learn more about updated dealer programs and technology innovation. Professionals who are not currently Savant authorized integrators, and are interested in attending the Populus session, can visit with a Savant representative on the show floor to secure a time slot.
